

Project Design Phase-II

Data Flow Diagram & User Stories

Date: 1 November 2025

Team ID: LTVIP2025TMID31059

Project ID: 99FCD0114CB4CB29D944F8D19DABB9DE

Project Name: Streamlining Ticket Assignment for Efficient Support Operations

Maximum Marks: 4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) visually represents the flow of information in the support ticketing system. It helps to understand how tickets are created, assigned, processed, and resolved. The DFD for this project illustrates the interaction between users, support agents, the admin, and the automated ticket assignment system.

In the project “Streamlining Ticket Assignment for Efficient Support Operations”, the DFD shows how incoming support tickets are received, categorized, and automatically assigned to available agents based on priority, skill set, and workload. The system aims to minimize manual effort and ensure faster ticket resolution.

Example:

1. A customer submits a support ticket through the portal.
2. The system checks ticket type, urgency, and agent availability.
3. The ticket is auto-assigned to the most suitable agent.
4. The agent receives a notification and begins working on the ticket.
5. Admins can monitor ticket flow, reassign tickets, and track performance.

This DFD highlights smooth coordination among users and automation for efficient helpdesk management.

User Stories:

User stories describe what each type of user expects from the system in simple, goal-based language. In this project, they ensure that ticket assignment, tracking, and communication happen seamlessly.

User Type: Customer

Functional Requirement (Epic): Ticket Creation

User Story Number: USN-1

User Story / Task: As a customer, I want to raise a new support ticket easily so that my issue can be resolved quickly.

Acceptance Criteria: System should allow users to submit tickets with clear issue categories and descriptions.

Priority: High

Release: Sprint-1

User Type: System (Auto-Assign)

Functional Requirement (Epic): Intelligent Ticket Assignment

User Story Number: USN-2

User Story / Task: As a system, I must automatically assign incoming tickets to the best available agent based on skills and load.

Acceptance Criteria: Ticket is assigned instantly without admin intervention, ensuring balanced workload.

Priority: High

Release: Sprint-1

User Type: Support Agent

Functional Requirement (Epic): Ticket Handling

User Story Number: USN-3

User Story / Task: As a support agent, I want to get instant notifications when a new ticket is assigned to me.

Acceptance Criteria: System must alert the agent in real-time with ticket details and priority.

Priority: High

Release: Sprint-1

User Type: Admin

Functional Requirement (Epic): Performance Tracking

User Story Number: USN-4

User Story / Task: As an admin, I want to monitor all tickets and agent activities to ensure timely responses.

Acceptance Criteria: Dashboard shows live updates on ticket status, response time, and agent efficiency.

Priority: Medium

Release: Sprint-2

User Type: Customer

Functional Requirement (Epic): Ticket Updates

User Story Number: USN-5

User Story / Task: As a customer, I want to get notifications when my ticket is assigned, updated, or resolved.

Acceptance Criteria: Users receive updates through email or the portal.

Priority: Medium

Release: Sprint-2
